

VOLTAGE HYDROPHONE PREAMPLIFIER RE1.1

Front Panel Controls

Operator reference

Reference for the three operator controls on the connector face. Switch states below describe the position of each latching push-button.

1 50 Hz Notch Filter

Switch position	Behaviour
Released (out)	50 Hz filter engaged — mains hum is attenuated.
Pressed (in)	Filter bypassed — full signal band passes unfiltered.

2 Power

Switch position	Behaviour
Pressed (in)	Unit powered on.
Released (out)	Unit powered off.

3 Gain

Knob direction	Behaviour
Clockwise	Gain increases.
Counter-clockwise	Gain decreases.

Set gain before the recording session and leave it fixed; A brief transient may be audible when the filter state or gain is changed
